Bioinformatics Open Source Conference 2017, Prague, CZ

# What is Biopython?

- ▶ Collection of modules for biological computation in Python
  - ▶ Sequence handling and motifs, parsers, database queries, protein structures, phylogenetics, tool wrappers and more.
- ▶ Started in 1999, first release in 2000
- ▶ Open source and freely available (Biopython license)

## In a Nutshell, Biopython...

... has had 11,237 commits made by 192 contributors representing 291,535 lines of code

... is mostly written in Python with an average number of source code comments

... has a well established, mature codebase maintained by a very large development team with increasing Y-O-Y commits

... took an estimated 75 years of effort (COCOMO model) starting with its first commit in December, 1999 ending with its most recent commit 3 months ago

Biopython 1.68 (released 2016-08-25)

## New Features in Biopython 1.68

- ▶ Final Release supporting Python 2.6
- ▶ Added extension to Bio.PDB to allow for parsing of the new MMTF format.
- ▶ Bio.pairwise2 rewritten to address speed and problems with local alignments.
- ▶ SeqGui and xbbtools rewritten using tkinter.
- ▶ Biopython now uses HTTPS instead of HTTP to connect to Entrez and QBLAST API.

Biopython 1.69 (released 2017-04-06)

## Start of re-licensing plan

- ▶ 1.69 marks the start of start of our re-licensing plan, to transition away from liberal *Biopython License Agreement* to the widely used *3-Clause BSD License*.
- ▶ The code base-authorship is being reviewed file-by-file, in order to gradually dual license the entire project.

## New features in Biopython 1.69

- ▶ Cellosaurus cell line database, cell ontologies and catalogues accessible through the `Bio.ExPASy` module.
- ▶ MAF files are now supported using the `Bio.AlignIO.MafIO` module
- ▶ Also offers indexed access for large files using SQLite3.
- ▶ Update to `Bio.Restriction` to include REBASE February 2017 restriction enzyme list.
- ▶ `Bio.PDB.PDBList` can download PDBx/mmCif (new default), PDB (old default), PDBML/XML and MMTF format protein structures.
- ▶ `Bio.Affy` module supports version 4 of Affymetrix CEL format

# Miscellaneous

- ▶ Miscellaneous bug fixes
- ▶ Test suite enhancements
- ▶ Better PEP8 and PEP257 coding style adherence
- ▶ Enhanced PyPy support by taking advantage of NumPy and compiling most of the Biopython C code modules

Biopython 1.70 (released 2017-07-10)

# New features in Biopython 1.70

- ▶ Module `Bio.AlignIO`
  - ▶ Support for XMFA file format using `Bio.AlignIO.MauveIO`
- ▶ Module `Bio.SearchIO`
  - ▶ Support for new arguments to read and write blast-xml files.
- ▶ Drop support for Python 3.3
- ▶ Deprecate support for Jython.
- ▶ Deprecate `Bio.GA` and `Bio.NeuralNetwork` modules.

# New logo for Biopython

- ▶ Version 1.70 marks the transition towards a new logo for Biopython.

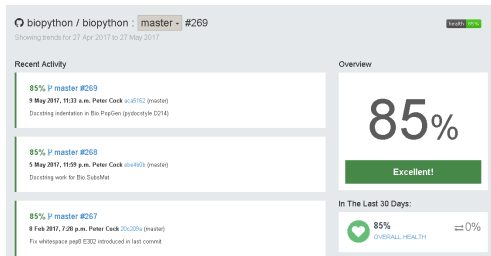

- ▶ The new logo was created by Patrick Kunzmann in 2017 and had support from the Python Software Foundation and the Biopython developers community.

# Supported Python Versions

- ▶ Python 2.7
- ▶ Python 3.4
- ▶ Python 3.5
- ▶ Python 3.6
- ▶ PyPy 5.7
- ▶ PyPy3 5.8 beta
- ▶ Jython 2.7 (support is deprecated)

# Continuous Integration

- ▶ TravisCI
- ▶ Experimentation with Build Stages for CI testing.
  - ▶ Codecov.io (test coverage)
  - ▶ Quantified Code (metrics and automatic pull requests)
  - ▶ Landscape.io (“health score”)
- ▶ Currently enabled by default: Codecov.io, Quantified Code
- ▶ Support for Appveyor for running Windows builds.

# Conclusion

- ▶ Lots of new contributors
- ▶ Lots of new stuff
- ▶ Turn new contributors into recurring ones
- ▶ Biopython 1.70 latest release

# Acknowledgements

- ▶ Peter Cock
- ▶ Biopython Community
